To whom it may concern

I am one of the founders of AmpSeis AS that has developed one of the world's most efficient and reliable seismic OBN (Ocean Bottom Node) system. OBN seismic has grown into a billion-dollar industry – surpassing streamer seismic, where PGS is the best-known player. As we were ready to start production of the nodes, AmpSeis was in December 2023 sold to PXGEO. PXGEO is the second largest OBN seismic company in the world, and has the capital and resources required for large scale production and operation of the nodes we developed in AmpSeis.

We confirm that during the development of the OBN system, AmpSeis collaborated with Pre Stack Solutions-Geo for detailed analysis of field and test data. Pre Stack Solutions-Geo (led by Chief Geophysicist and owner Rune Øverås) is regarded as a highly competent company in seismic technologies and geophysics.

Regards,
