

Acknowledge letter

This letter serves to acknowledge that **PSS-GEO**, under the direction of Chief Geophysicist Rune Øverås, completed the work and delivered the data as follows:

Post-stack processing of some 350km² 3D seismic from Block 1, Benin

1. Perform denoise/deghosting
2. Construct velocity fields from available well data.
3. Time domain Demigration.
4. Construct velocity field for Depth Migration.
5. Depth domain Migration.
6. Post-mig processing
7. Use the Proprietary technique to invert data for Vp and Density.
8. Output high-resolution reflectivity and seismic data.

Delivery in SEG-Y format:

1. Rock Properties cubes
2. High-resolution reflectivity and it's seismic response
3. Two velocity field for Depth Migration
4. Seismic processed cubes in Time and Depth
5. HRS Project
